PROFESSIONAL SUMMARY

Python Developer and Technical Operations Executive with hands-on experience in Flask-based full stack development, MT5 trading platform administration, and CRM operations. Skilled in building scalable web applications with Python, Flask, SQL, SQLAlchemy, and JavaScript, with a strong foundation in REST APIs, database management, and responsive UI design. Experienced in technical support, account troubleshooting, and cross-team coordination, with a continuous focus on writing clean, maintainable code and solving real-world problems.

SKILLS

Languages: Python, C, SQL, HTML, CSS, JavaScript

Frameworks & Libraries: Flask, SQLAlchemy, Tailwind CSS, Bootstrap

Tools & Platforms: MySQL, SQLite, Git, GitHub, REST APIs, MT5 Administration, CRM Operations

Development Environments: VS Code, PyCharm, Jupyter Notebook

Core Strengths: Technical Support, Problem Solving, Critical Thinking, Communication, Leadership

WORK EXPERIENCE

Technical Operations Executive | Rotex IT Solutions

January 2026 – Present

- Manage daily technical operations using MT5 Terminal, MT5 Manager, and MT5 Administrator platforms.
- Operate CRM systems for client account management, commission tracking, and reporting.
- Support account setup, troubleshooting, and broker/client technical issue resolution.
- Monitor trading operations and coordinate with cross-functional teams to resolve platform-related issues, ensuring smooth execution of trading workflows.

PROJECTS

Auto Sarathi – Real-Time Ride Booking Platform

Tech Stack: React.js, Vite, Tailwind CSS, Node.js, Express.js, Socket.IO, Supabase, PostgreSQL, PostGIS, JWT, LocationIQ

- Developed a full stack ride-booking platform enabling real-time ride matching and live location tracking between passengers and auto-rickshaw drivers.
- Implemented secure JWT-based authentication and role-based access control for Users, Drivers, and Admins.
- Built real-time communication workflows using Socket.IO for ride requests, ride acceptance, OTP verification, live GPS tracking, and ride status synchronization.
- Designed RESTful APIs and integrated Supabase PostgreSQL with PostGIS for ride management, geospatial queries, and driver location tracking.
- Developed interactive map-based booking and route visualization features using LocationIQ, improving navigation and user experience.

DocManager

Python, Flask, SQLite, SQLAlchemy, Bootstrap, HTML, CSS, JavaScript

- Built a full stack clinic management system for patient records, visit tracking, and follow-ups.
- Implemented authentication, dashboard analytics, follow-up tracking, and search functionality.
- Designed a professional, healthcare SaaS-style interface using Flask, SQLAlchemy, and Bootstrap following industry best practices.

Jarvis – Voice Assistant (Python)

Sept 2024 – Oct 2024

- Developed a voice-controlled personal assistant using Python with web browsing, music playback, and news updates.
- Integrated the OpenAI GPT API to power AI-based query responses.

EDUCATION

Sanjay Ghodawat University — B.E./B.Tech, Computer Science and Engineering

Sept 2022 – Present

Kolhapur, India | CGPA: 8.03 (Semester 6)

K.L.E.'s Independent PU College — PUC, PCMB

June 2020 – June 2022

Nipani, India | Percentage: 86%

K.L.E.'s Society's English Medium CBSE School — SSC

June 2014 – May 2020

Nipani, India | Percentage: 67%

CERTIFICATES

Python Crash Course — Udemy

June 2025

- Learned core Python syntax, data types, and control structures; built hands-on projects applying coding concepts.

HTML5, Python, Flask Framework — All-in-One Complete Course

August 2024

- Learned web development fundamentals using HTML5 and Python; built dynamic web apps using the Flask micro-framework, covering backend routing, templating, and deployment basics.
